

PANDACODEGEN.COM

Full Site Audit & Ad-Readiness Report

March 30, 2026 — All Pages Audited

Ad-Readiness Verdict: 8.5 / 10 — Ready to Run Ads

The site is **ready for paid ads** with only a handful of minor fixes needed. The foundation is excellent: fast load times, clear value proposition, strong trust signals, multiple conversion paths, and professional design. The issues found are small polish items, not blockers.

Page-by-Page Status

Page	URL	Ad-Ready?	Issues
Homepage	/	READY	Minor: light text contrast in some sections
Services Hub	/services	READY	None
WordPress Migration	/services/wordpress-migration	EXCELLENT	None — best ad landing page
E-Commerce / Shopify	/services/ecommerce	READY	None
Wix Migration	/services/wix	READY	None
Squarespace Migration	/services/squarespace	READY	None
Webflow Migration	/services/webflow	READY	None
WooCommerce	/services/woocommerce	READY	None
GoHighLevel	/services/gohighlevel	READY	None
Custom Engineering	/services/custom-engineering	READY	None
Case Studies	/work	MINOR FIX	Duplicate title tag: PandaCodeGen PandaCodeGen
Pricing	/pricing	MINOR FIX	Hero text renders very light/faded initially
Partners	/partners	MINOR FIX	Hero text renders very light/faded initially
About	/about	EXCELLENT	None
Hassan Bio	/about/hassan	EXCELLENT	None
Imran Bio	/about/imran	EXCELLENT	None

Contact	/contact	EXCELLENT	None — ideal for lead gen ads
Blog	/blog	READY	Duplicate title tag: PandaCodeGen PandaCodeGen
Blog Posts	/blog/*	EXCELLENT	Author bylines, dates, read time all present
Privacy Policy	/privacy	PASS	Up to date (Mar 4, 2026)
Terms of Service	/terms	PASS	Up to date (Jan 26, 2026)
Cookies	/cookies	PASS	Up to date (Jan 26, 2026)

Issues to Fix Before Running Ads

1. Duplicate Title Tags (2 pages)

Severity: MEDIUM | Affects Google Ads Quality Score and search result appearance.

/work page: "Our Work — Client Case Studies & Results | PandaCodeGen | PandaCodeGen" → Remove the duplicate "| PandaCodeGen"

/blog page: "Web Development & Performance Blog | PandaCodeGen | PandaCodeGen" → Same fix, remove duplicate

2. Hero Text Contrast on /pricing and /partners

Severity: MEDIUM | The hero section text on the Pricing and Partners pages renders very light/faded on initial load. If someone lands on these pages from an ad, the first impression is a near-blank page before the text fully renders. This is likely a CSS animation or font-loading issue.

Fix: Check the CSS fade-in animation timing. Either make the initial state visible or reduce the animation delay to under 200ms. For ad landing pages, the headline should be visible instantly.

3. Chat Widget Positioning

Severity: LOW | The "LET'S CHAT" widget can overlap content on some pages, particularly on mobile. For ad traffic (which skews mobile), this could block CTAs or content.

Fix: Test the chat widget on mobile viewports across all pages. Consider a smaller, less intrusive initial state that expands on tap.

Ad Campaign Strategy Suggestions

Best Pages to Use as Ad Landing Pages

Campaign Type	Best Landing Page	Why
WordPress migration leads	/services/wordpress-migration	Specific, focused, strong before/after metrics, clear CTA
Shopify / E-commerce leads	/services/ecommerce	Targets Shopify pain points (fees, speed), ROI-focused
General web dev leads	/ (homepage)	Broad value prop, AI audit tool creates engagement
Price-conscious leads	/pricing	Transparent pricing builds trust, removes objection
Agency partnerships	/partners	White-label program clearly explained, wholesale rates
Trust/proof seekers	/work	Real case studies with metrics (fix title tag first)
Contact/bottom funnel	/contact	Clean form, minimal friction, 2-hour response promise

Recommended Google Ads Campaigns to Start With

Campaign 1: WordPress Migration (Highest Intent)

Keywords: "wordpress migration service", "migrate wordpress to next.js", "wordpress too slow", "replace wordpress", "wordpress alternative for business"

Landing page: /services/wordpress-migration

Why: WordPress migration is your clearest differentiator. The page has strong before/after proof and a compelling CTA. This keyword cluster has high commercial intent.

Campaign 2: Slow Website / Speed (Pain Point)

Keywords: "slow website fix", "website speed optimization", "pagespeed score improve", "website loading slow", "fast website builder"

Landing page: / (homepage) — the "Your slow website is costing you revenue" headline directly matches this intent

Why: The homepage is built around this exact pain point. The revenue calculator and AI audit tool create engagement.

Campaign 3: Shopify Speed / Migration

Keywords: "shopify speed optimization", "shopify slow site", "headless shopify", "shopify hydrogen", "shopify alternative"

Landing page: /services/ecommerce

Why: Shopify merchants paying \$150+/month in platform fees are a strong audience. Your \$0/month hosting angle is a powerful differentiator.

Campaign 4: Webflow / Wix / Squarespace Migration

Keywords: "webflow migration", "wix migration", "squarespace migration", "move from wix to custom", "webflow too expensive"

Landing pages: /services/webflow, /services/wix, /services/squarespace (platform-specific)

Why: Each platform has its own pain points. Running separate ad groups with platform-specific landing pages will give you higher Quality Scores and better conversion rates.

Conversion Optimization Tips for Ad Traffic

What's Already Working

- Multiple CTA touchpoints on every page (header button + inline CTAs + footer CTA)
- Revenue calculator on homepage creates engagement and self-qualified leads
- AI audit tool is a powerful lead magnet — visitors input their URL = warm lead
- Transparent pricing removes a major objection
- Real case studies with before/after metrics build trust fast
- Founder offer (\$500 migration) creates urgency and low barrier to entry
- “2-hour response time” promise on contact page reduces friction
- Legal pages are all up-to-date (required for Google Ads compliance)

Suggestions to Improve for Ads

1. Add Google Ads conversion tracking: Set up conversion events for: form submissions, phone clicks, chat initiations, and AI audit tool usage. Without this, you can't optimize campaigns.

2. Set up Google Tag Manager: Install GTM if not already present. This will let you track micro-conversions like scroll depth, time on page, and CTA clicks without code changes.

3. Add a phone number to mobile header: The phone number is in the desktop nav but may not be prominent enough on mobile. For paid traffic, a click-to-call button is a high-converting action.

4. Consider a sticky mobile CTA bar: A fixed bottom bar on mobile with “Get Free Quote” and “Call Now” buttons would capture ad visitors who scroll past the header CTA.

5. Add more case studies: You have 1–2 case studies visible. For ad traffic, having 4–6 across different industries (e-commerce, B2B, agency, etc.) would help more visitors see themselves as your customer.

6. Grow review count: 6 total reviews across all platforms is thin. Google Ads show seller ratings at 100+ Google reviews. Aim for 15–20 Google reviews to start seeing ad extensions.

7. Implement remarketing pixels: Install Google Ads remarketing tag and Meta pixel (if running Facebook ads). Visitors who use the AI audit tool or view pricing are warm leads worth retargeting.

Pre-Launch Checklist

Complete these before spending money on ads:

#	Task	Priority	Time
1	Fix duplicate title tags on /work and /blog pages	HIGH	15 min
2	Fix hero text fade/contrast on /pricing and /partners	HIGH	30 min
3	Install Google Ads conversion tracking (form, phone, chat)	CRITICAL	1-2 hrs
4	Install Google Tag Manager	CRITICAL	30 min
5	Set up remarketing pixel (Google + Meta)	HIGH	30 min
6	Test chat widget on mobile (all pages)	MEDIUM	30 min
7	Verify all forms submit correctly	HIGH	15 min
8	Set up Google Business Profile (for local ads + reviews)	MEDIUM	1 hr
9	Create dedicated ad landing page variants (optional)	LOW	2-4 hrs
10	Set up call tracking number for ad attribution	MEDIUM	30 min

Final Verdict

PandaCodeGen.com is **ad-ready**. The site's design, messaging, trust signals, and conversion paths are strong. Fix the 3 minor issues (duplicate titles, text contrast, chat widget), set up proper conversion tracking, and you can start running campaigns. The service-specific landing pages (/services/wordpress-migration, /services/ecommerce, etc.) are particularly well-suited for high-intent Google Ads campaigns.
